

Japanese Station at Ny-Ålesund in 1991

NIPR has been operating Research Station (Rabben) in Ny-Ålesund for continuously observing to atmosphere, cloud, GHG, ecosystem, etc., since 1991.

View from station, August 1991

Early station diary

Japanese Station at Ny-Ålesund 1991-2019

Cloud radar

All-Sky Camera

i-Skyradiometer

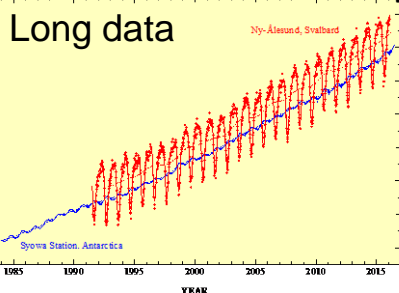

Station for diverse subjects and scales

BC monitor at Mt Zeppelin

Measurement system for GHG

Soil CO2 Flux

Lidar/MPL

Svalbard Radar, LYB

Base of Japanese research at Ny-Ålesund 2019-

In March 2019, **New Research building** was completed at the central area of Ny-Ålesund in cooperation with the Government of Norway.

NIPR is now moving to the new building (by September 2019) to start a new research at the station, and to promote more collaboration with other countries' researchers.

Observation deck, sky window, laboratories

Meeting room, storage area, bed rooms

A modern living room with a large window overlooking a snowy mountain landscape. The view includes a lake, a small wooden house, and a large snow-capped mountain peak. The room features a dark blue sectional sofa, a coffee table, and a dining table with chairs. The text "Looking for more collaborations with you" is overlaid on the image.

Looking for more collaborations with you

Thank you
